

PEATS URBAN MULCH™

For use in commercial
landscape

FACT SHEET

A Specifically Designed Composted Organic Surface Mulch

Peats Urban Mulch is a natural organic product made from recycled green organics that have undergone a thermal pasteurization process to ensure that such things as weed seeds and other pathogens have been destroyed.

Peats Urban Mulch has a nutrient value in its own right and reduces loss of existing nutrients in the soil whilst promoting earthworm and microbial activity.

During its production Peats Urban Mulch has passed through a larger screen hence is ideally suited to those large commercial mulching projects.

Properties

- Improves soil structure
- Improves moisture retention
- Improves soil nutrient retention
- Promotes healthy plant growth

Application Rates - Approx

Recommended to be applied at a depth of 50mm.
Used as a ground cover mulch.

Peats Urban Mulch is an organically certified input product as stated by NASAA (National Association for Sustainable Agriculture Australia).

Warning: Organic composted mulches are produced from recycled green organics and as such may contain levels of inorganic contaminant materials. Precautionary measures such as the wearing of gloves and enclosed footwear is recommended.
